Carmaster Digital Service Platform

Powered by Workshop Pro | Marketing Analysis & Feature Positioning Document

This document summarizes the current Carmaster platform capability, marketable value, and visual proof of each key module, based on the live app environment and aligned to the current WorkshopPro marketing website.

Prepared: 14 March 2026

Executive Summary

Carmaster operates a unified operations and customer engagement platform: a staff portal for workshop management and a public PWA for customer-led job capture. The product combines CRM, jobs, quotes, invoices, reminders, and branded self-service booking into one workflow.

A key differentiator is the workshop arrival flow: customers can scan a QR code when they arrive, open the public experience on their phone, then choose whether they want to log a repair job or a general service request. The same customer journey is fully mobile friendly and works as an installable PWA for faster repeat use.

Target users
Workshop owners, service advisors, technicians, and arriving customers

Core value
Faster intake, less admin, better conversion, and stronger repeat service follow-up

Differentiator
Staff portal + QR arrival flow + installable customer PWA in one stack

Marketable Product Capabilities

Operations Control

- Dashboard with current-month job count, 12-month trend reporting, and overdue work visibility.
- Centralized job lifecycle management with search, status handling, due-date visibility, and mobile image uploads.
- Customer records tied to vehicle rego, contact data, service history, and

Revenue Workflow

- Quote creation and sharing pipeline with customer approve/decline links.
- Invoice workflow with draft generation, numbering, PDF generation, and outbound communication support.
- Upsell and package support for maintenance monetization.

historical jobs.

- Automated service schedule and renewal reminder monitoring.

Customer Experience

- Public QR code that customers can scan when they arrive at the workshop.
- Installable public PWA for quick self-service booking, repair requests, and regular service requests.
- Fully mobile-friendly intake with WOF/Rego context and guided form progression.
- Branded experience: Carmaster identity with “powered by Workshop Pro”.

Platform & Security

- JWT-authenticated staff portal + Office 365 SSO support.
- Public endpoint throttling and validated request contracts.
- Configurable settings for business branding, service catalogs, checklists, and PWA identity.
- Role-aware admin controls for branding, services, and integration settings.

Complete Feature Inventory

Staff Portal Modules

- Dashboard with job activity, monthly reporting, and overdue tracking.
- Jobs module for create, search, edit, delete, status updates, and due-date warnings.
- Customers CRM with rego, phone, email, job history, and service context.
- Quotes with digital approval links and draft invoice conversion.
- Invoices with PDF generation, document download, and send workflow.
- Service schedule management with renewal reminder monitoring.
- Settings for business profile, theme colors, service categories, checklists, and Office 365 placeholders.

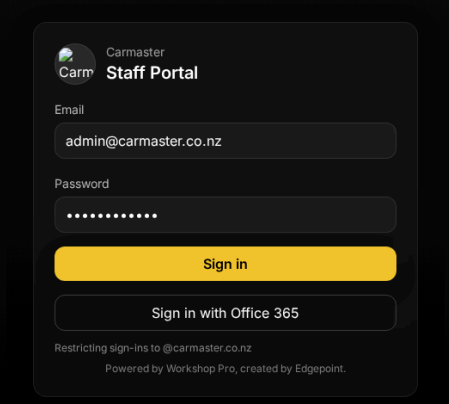
Customer-Facing Experience

- Workshop QR code signage that sends customers directly to the public intake experience.
- Customer choice between logging a repair job or a regular service request.
- Mobile-friendly, step-by-step intake flow designed for phone use while on site.
- Installable PWA for faster repeat bookings and ongoing convenience.
- Service package and upsell support to increase average job value.
- Call shortcut and branded presentation for a cleaner workshop arrival experience.

Feature Screenshots (Current System)

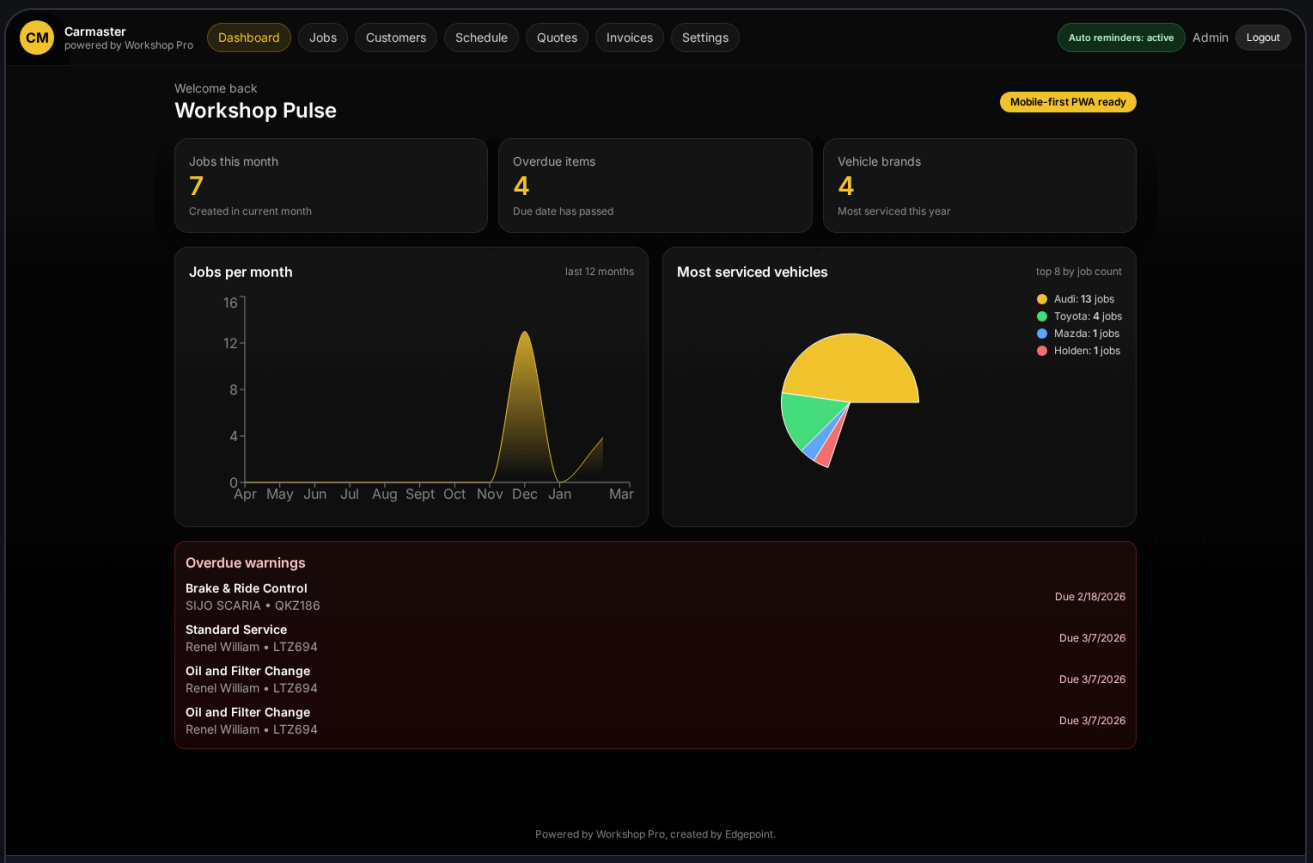
Each image below is captured from the running application and maps directly to a marketable feature.

1) Staff Login & Secure Access



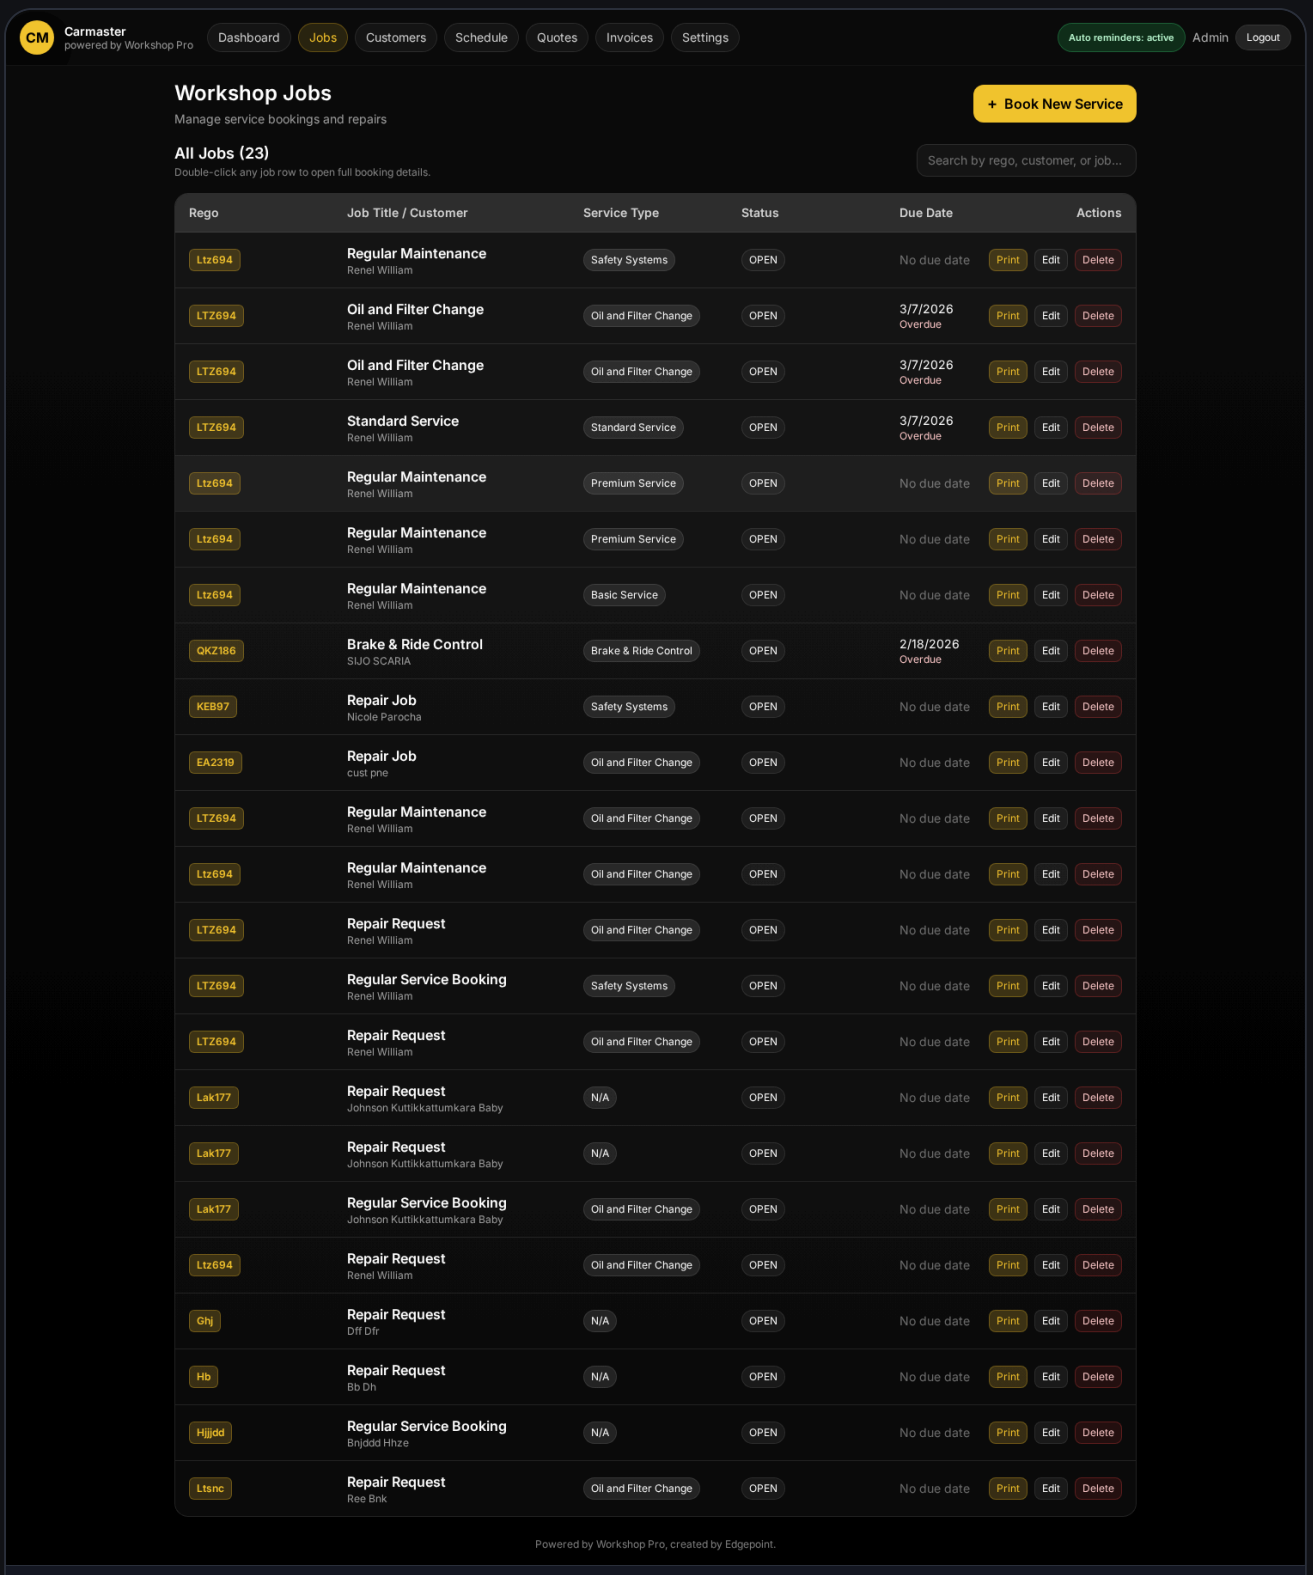
Staff access gateway with secure portal entry, role-aware access, and Office 365 sign-in support.

2) Dashboard & Performance Visibility



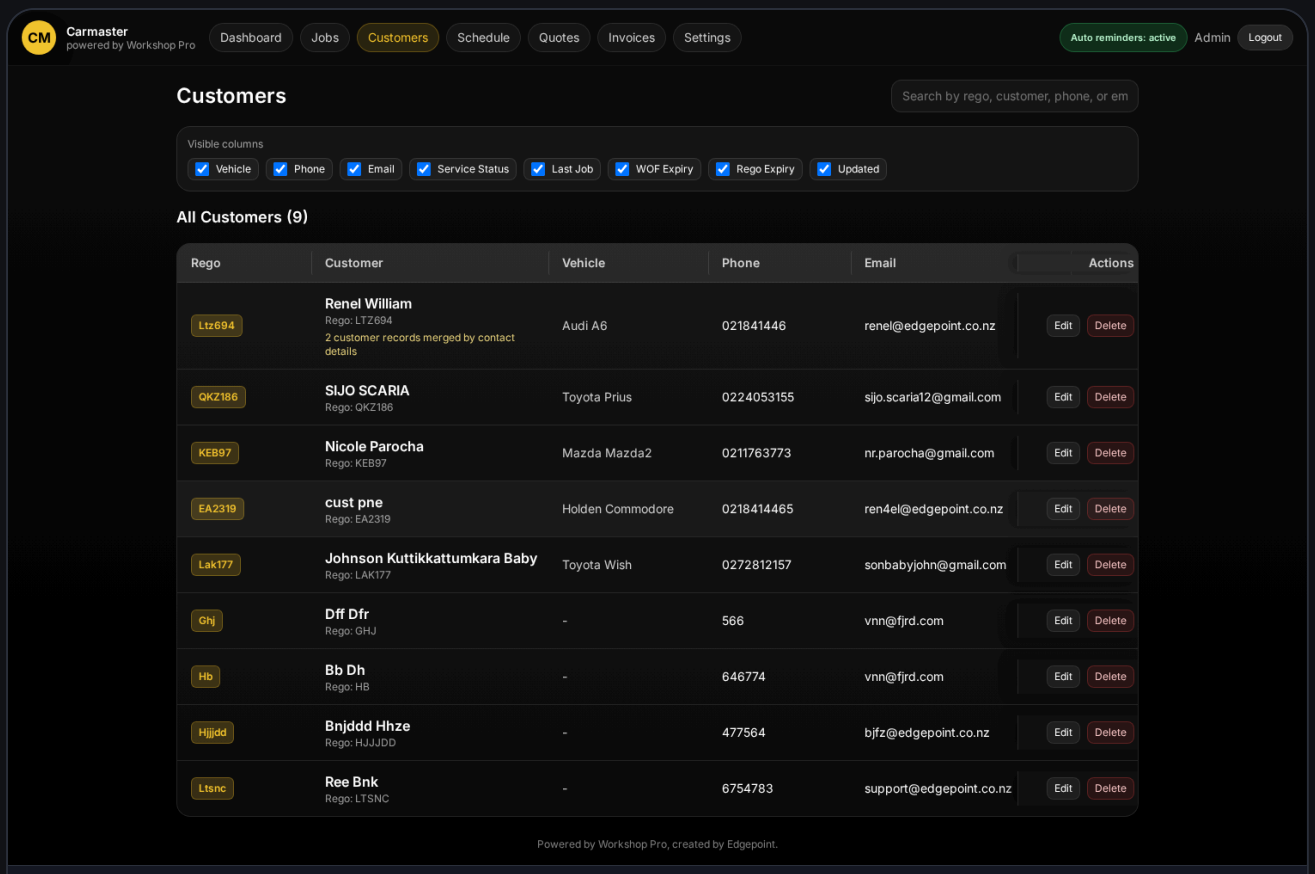
Executive snapshot with monthly job trends, workload visibility, and overdue oversight.

3) Jobs Management



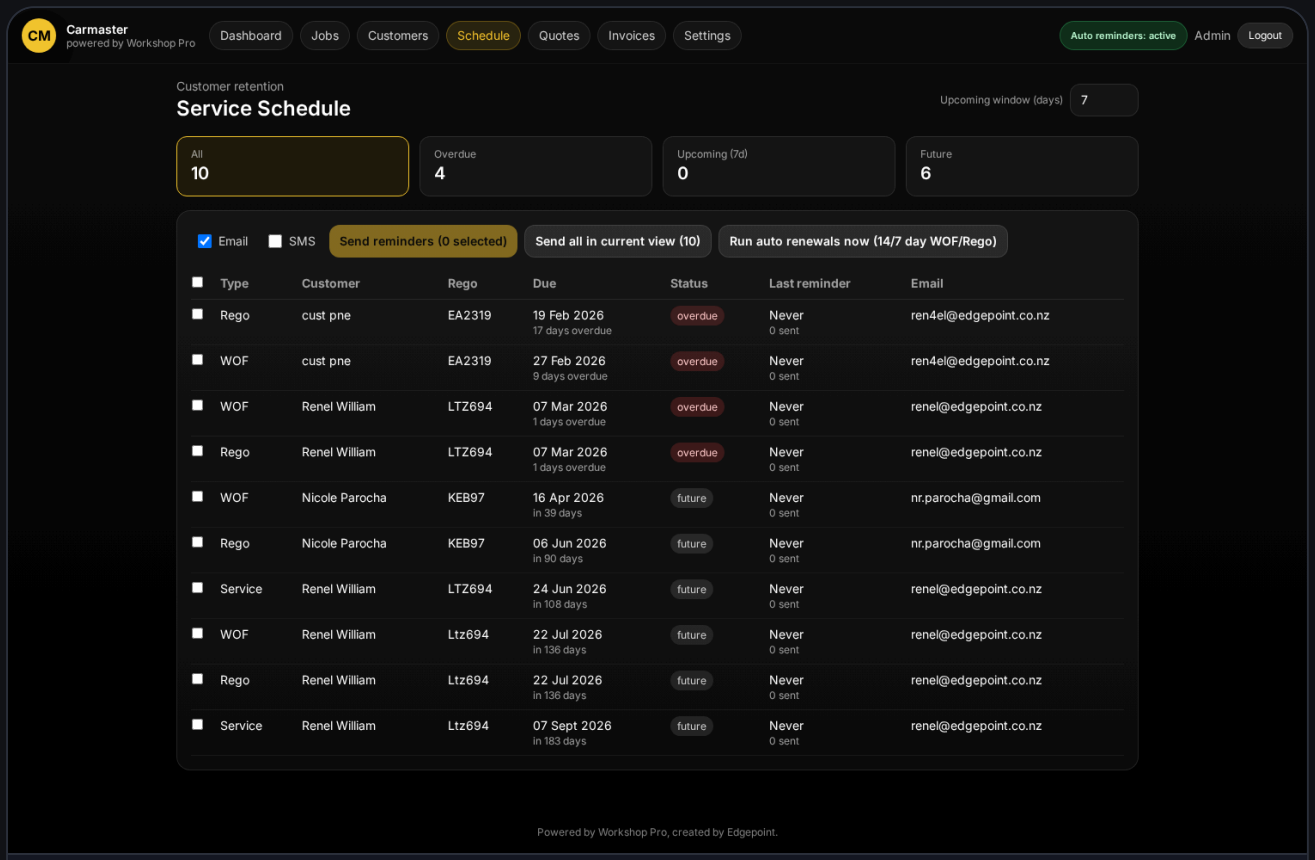
Operational command center for service and repair jobs, with search, status control, and job-level actions.

4) Customers CRM



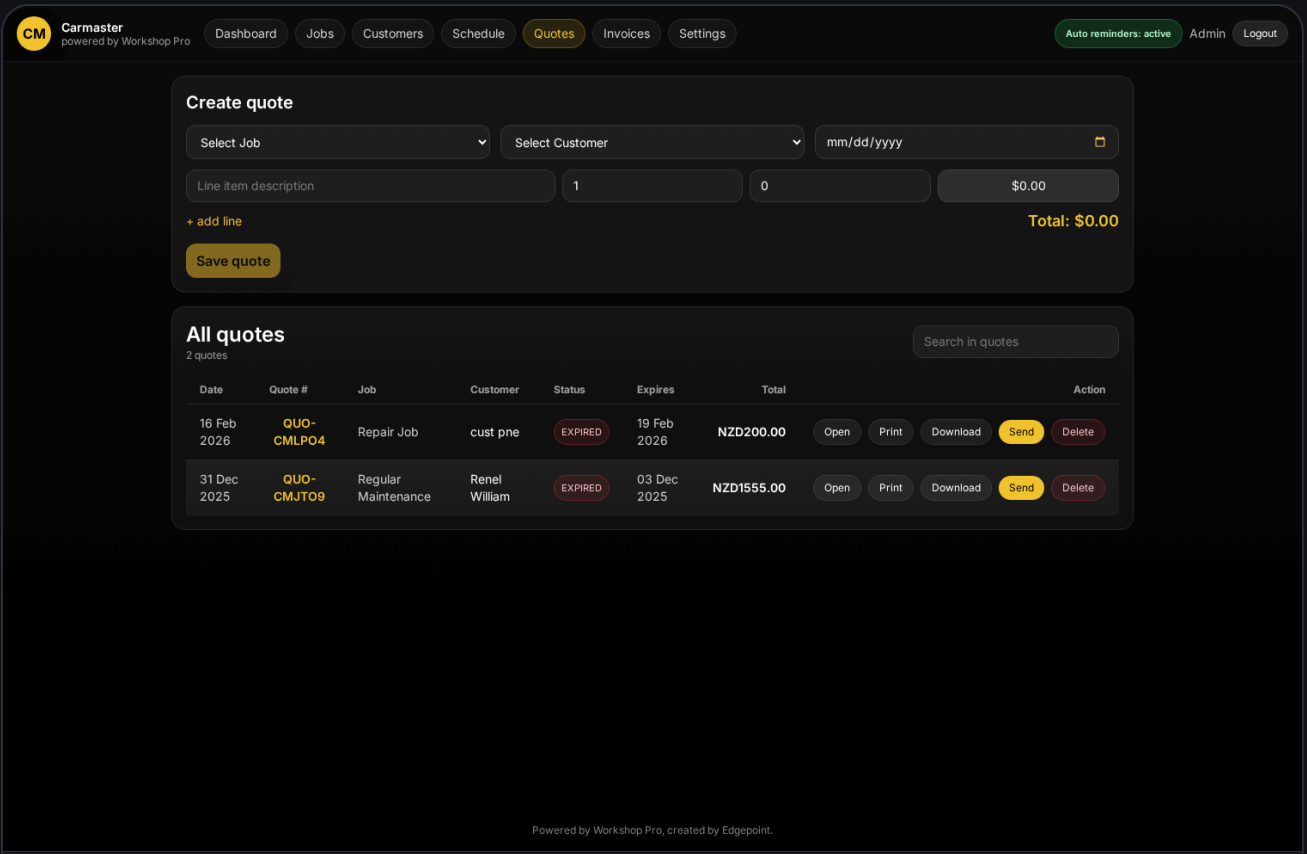
Customer and vehicle-centric records, supporting retention, service history, and context-driven service.

5) Service Schedule & Renewals



Service scheduling and reminder oversight for recurring business continuity.

6) Quotes Workflow



Quote management pipeline designed to shorten decision-to-approval time through digital customer responses.

7) Invoicing Workflow

Guided mobile booking flow where customers can log either a repair job or a regular service request from their phone.

Customer QR Arrival Flow

- **Step 1:** Customer scans the QR code at reception or when arriving at the workshop.
- **Step 2:** The public Carmaster experience opens instantly on their phone.
- **Step 3:** The customer selects whether they need a repair job or a regular service.
- **Step 4:** Vehicle and service details are submitted into the workshop system for staff follow-up.
- **Step 5:** The customer can install the PWA for quicker repeat bookings in future.

Why this matters

- Reduces front-desk bottlenecks during busy arrival periods.
- Improves data capture quality at the point of intake.
- Supports a fully mobile-friendly workshop experience.
- Creates a stronger branded journey from arrival through to follow-up.

Positioning Angles for the Marketing Website

- **“One system, full workshop lifecycle”:** from lead intake to invoice and reminder automation.
- **“QR arrival check-in”:** customers can scan on arrival and log a repair or general service request themselves.
- **“Mobile-friendly customer conversion”:** QR + PWA experience reduces friction for new and returning bookings.
- **“Admin-light operations”:** integrated jobs, CRM, quotes, invoices, and reminders reduce system switching.
- **“Brand-safe rollout”:** Carmaster front-facing identity with Workshop Pro technology attribution.
